## MOBILE APP- SETUP GUIDE

For stable connection to the IntelliLink app, internet data connection is required at both intercom and mobile device.

The video monitor should be located within close range of modem with a strong Wi-Fi connection with at least 1.5Mbps upload connection speed.

If you are unsure of your Wi-Fi connection and speed, we suggest downloading a free Wi-Fi test app such as "Speedtest by Ookla" and test the connection at the intended location of the monitor.

If the Wi-Fi signal is low, we suggest moving your modem closer to the monitor or purchasing Wi-Fi extenders to boost your signal.

### A. Introduction

This Setup Guide shows you how to configure the IntelliLink WiFi Intercom to connect with the Mobile App.

#### Getting the IntelliLink App

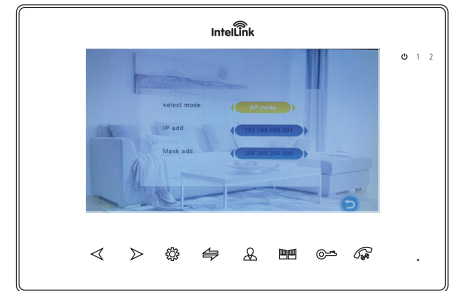

1. Download the free "IntelliLink" App from the Apple App Store, or the Google Play Store.
2. Tap the IntelliLink app icon to start the mobile app.
3. Register a free account with your Email address.

Note: The mobile App requires access to the Internet via 3G/4G or Wireless network.

### B. Preparing the IntelliLink Intercom for Connection

1. Power up the IntelliLink Intercom
2. Press  to enter the Main Menu
3. Press  again to select the "System" icon.
4. In the System menu, press  &  to highlight the "Network Setting" icon. Then press  to confirm selection.
5. Press  again to choose the "Wi-Fi Set" icon.
6. In the next submenu, the "AP Mode" is already selected by default. Press  twice to confirm this default selection. The Monitor will reboot itself to enter AP-mode, and start a temporary hotspot ("SmartLife-Doorbell")

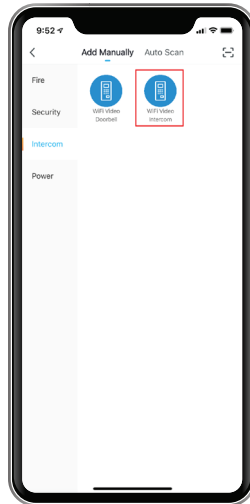

### C. Pairing Intercom to IntelliLink App (Steps for AP-mode connection)

We are now ready to connect Intercom to IntelliLink App.

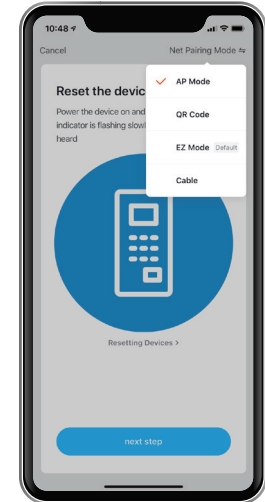

1. In IntelliLink App, tap "Add Device".

2. In the left column, tap "Intercom". Tap the "WiFi Video Intercom" icon.

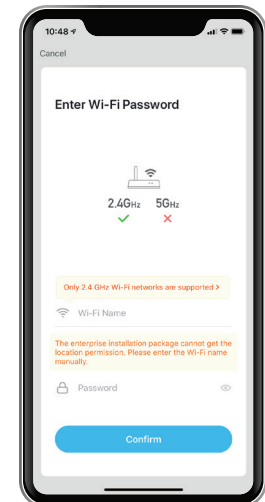

3. Tap "Net Pairing Mode" on top right corner of App screen. And select "AP Mode" from the dropdown list. Then tap the "Next Step" button at the bottom of screen.

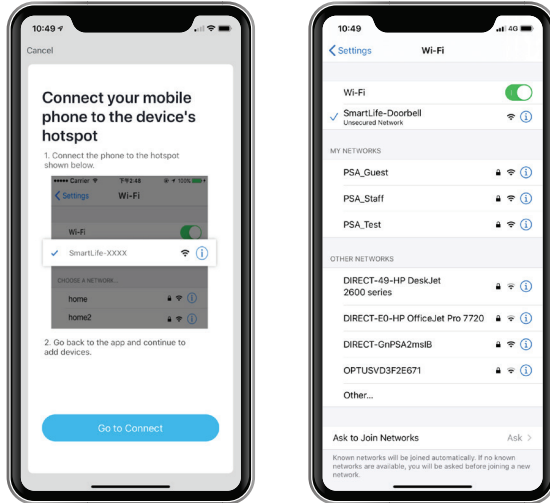

4. Enter the login details of your local WiFi network, together with its password. Tap "Confirm" to save the Wi-Fi setting.

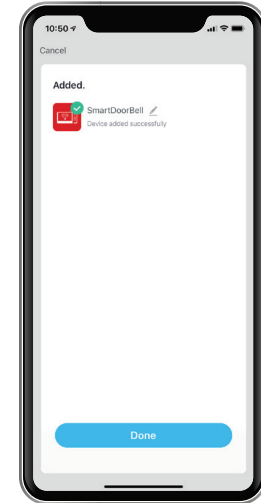

(This Wi-Fi information will be stored in the Intercom only, so that it can access the Internet through your Wi-Fi network. This is necessary for remote App access to your Door Station)

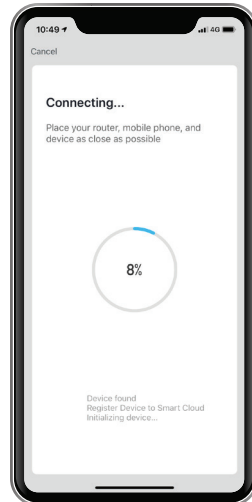

5. When prompted, go to the iPhone Settings, and select the Intercom's hotspot ("SmartLife-xxxxx") as your Wi-Fi connection. Once successful, a green check mark appears against the SmartLife (Intercom) in the WiFi menu.

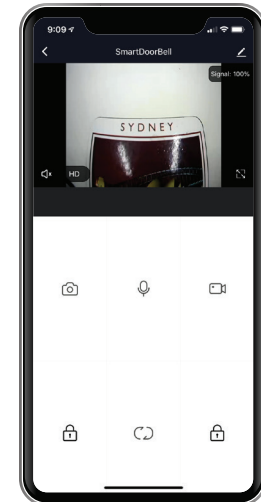

7. If successful, the App will report "Device added successfully". Tap "Done" to acknowledge. Congratulations, your phone is now paired with the IntelliLink Intercom.

6. Switch back to the previous IntelliLink App screen, and the App should automatically start connecting with the IntelliLink Intercom (and register the device online).

8. Tap on the Smart Doorbell icon to test the connection. This should lead you to a control menu, which provides a Live View from the Door Station, plus other control options (e.g. to operate the door relay remotely).

CONGRATULATIONS! You have now paired your IntelliLink Video Intercom to the IntelliLink App.
